

Display Features

Contributed by Michael Farney
Thursday, 01 October 2009

Synchronized VideoA giant green eye ball, spiders, and flaming pumpkins are just a few of things you will projected in the window. While video is used predominately for the announcement portions of the display, it also is used during **Fantasmic!** to project a floating image for the magic mirror. **Fireworks / Water Jets**The display features three 10 foot poles wrapped with 1400 lights each. The poles are used to simulate water jets as well as firework launches during the **Fantasmic!** piece. The fireworks on the roof were built with coroplast and Christmas lights, and they simulate the firework burst. **Strobes**Over 200 strobes adorn the roof producing the wow sparkle for the fireworks. In addition, the martin atomic strobe in the yard throws an impressive 3,000 watts of light on the house for a frightening effect. (A standard light bulb is 60 watts.) **Fog**Periodically, fog is randomly sprayed in the display, but the **Fantasmic!** piece uses fog strategically. From creating a creepy atmosphere to capturing light beams from moving light projections, fog greatly enhances the display effects. **Projections**The display features 8 moving head light fixtures. 6 provide RGB color mixing capable of bathing the house in over 16.7 million unique colors. They also swing wildly during portions of **Fantasmic!** to create a spooky light beam in fog effect. The other lights are loaded with images and project moving images and messages on the house using 500 watts and 250 watts of light respectively. **Laser**The display features laser shows for portions of some songs including **Ghostbusters**, **Purple People Eater**, and **Fantasmic!**. These songs occur periodically in the show cycle, and they can also be requested on demand using the phone request line. **Request Line**One of the new features this year is the addition of a song request hotline. Patrons viewing the display can call the request phone number and choose the next song! It's automated and easy. Just call in and follow the voice prompts to pick the song you want to hear. Don't remember what songs we have this year? Our automated attendant Gus the Ghost will answer your call, and he will be happy to tell you all about the songs we have. Come by the display and try it out! **FM Broadcast**The show's synchronized audio occurs through speakers in the front yard which shut down at 9pm. The display is also simulcast on 99.1FM from a transmitter inside the house. Patrons within 2 blocks of the house can tune into 99.1FM to pick up the display audio 24/7. **Live Broadcast**Our website has live webcams of the display as well song history and other information. In addition, the audio is streamed live on the web. Check it out at http://ForestParkLights.com/component/option,com_wrapper/Itemid,43/
